

## **CompAir gets the industry talking at Air-Tech 2010**

### **CompAir now the official seminar sponsor of Air-Tech exhibition**

Compressor manufacturer, CompAir is proud to be the official seminar sponsor of Air-Tech 2010, the compressed air industry's dedicated exhibition for plant professionals.

Commenting on the significance of the show, CompAir UK managing director, Colin Mander said, "In just four years, Air-Tech has grown to be an important event in the compressed air industry calendar and the ideal venue to view the latest technological developments that can help improve plant efficiencies.

This year, we have chosen to sponsor the Air-Tech theatre and seminar programme, as we believe it is important for plant and process managers to learn more about the issues and legislation affecting their daily operations and to discover some of the new solutions on offer from suppliers."

Visitors to the show can view products from the company's extensive product range across two separate stands, where experts will be on hand to advise on the various equipment options available.

The CompAir area will exhibit a broad range of compressor models and ancillaries, including the latest range of variable-speed units ranging from 11kW to 250kW. Engineered to deliver high energy efficiency with low cost of ownership, the new range is designed to meet the wide variation in air demand necessary in modern processes.

A second stand will be dedicated to the company's Hydrovane brand; an industry-proven range of rotary vane compressors with high versatility and low noise levels.

Colin Mander continues, "We are committed to providing high performance, cost-efficient compressed air systems for industry through the CompAir, Hydrovane and Gardner Denver brand; both in the UK and across the globe.

Despite the tough economic climate, we are continuing to develop new and innovative technologies to help improve productivity and cost of ownership and Air-Tech provides the ideal platform to showcase these solutions to customers."
